

context dependence 49
 context-free 210–211
 context-sensitive 156–158, 169,
 210–211
 continuation 115
 corecursion 75
 coroutine 239
 cotermination 75
 covariant 31
 currying 26

D

data constructor 30
 data sharing
 efficiency of 36–37
 overview 35–36
 type inference for higher-
 order functions
 37–38
 data types
 for parallel computations
 96–100
 for property-based testing
 creating API 127–128
 generators 130–131
 generators that depend on
 generated values
 131–132
 properties 128–130,
 132–134
 state action data type 87–88
 tuple 45
 deadlock, avoiding
 non-blocking implementation
 implementing map2 via
 actors 118–120
 overview 115–117
 using actors 117–118
 for parallel computations
 113–115
 def keyword 18
 disjoint union 61
 downcasting 111
 driver 272
 DSL (domain-specific
 language) 229
 dynamic resource
 allocation 291–292

E

early termination 269
 EDSL (embedded domain-
 specific language) 229

effect scoping 253
 mutable arrays 262–263
 mutable references 258–259
 mutable state actions
 259–262
 overview 256
 purely functional in-place
 quicksort 263–264
 scoped mutation 256–258
 effectful 231
 effectful channels 291
 effects vs. side effects 209,
 250–251
 efficiency
 of data sharing 36–37
 recursion over lists 44
 Either data type 60–63
 embedded domain-specific
 language. *See* EDSL
 encapsulation 46
 equality witness 288
 equals for equals 10
 error handling without excep-
 tions. *See* exception
 handling
 error reporting
 controlling branching
 163–165
 error nesting 162–163
 overview 160–161
 possible design for 161–162
 exception handling
 checked exceptions 50
 Either data type 60–63
 exceptions
 alternatives to 50–52
 pros and cons 48–50
 Option data type
 exception-oriented
 APIs 56–60
 lifting functions 56–60
 overview 52
 usage 53–56
 explicit forking 102–104
 explicit thunk 68
 expression substitution 12
 expressiveness 123
 extensible process type
 dynamic resource
 allocation 291–292
 effectful channels 291
 multiple input streams 287
 overview 278–281
 resource safety 283–285
 single-input processes
 285–287

sink for 290–291
 sources for 281–282
 extensional equality 266
 external effects
 asynchronous I/O 247–250
 avoiding StackOverflowError
 control flow 237–239
 overview 237
 trampolining 239–240
 IO type for
 asynchronous computa-
 tions 241–242
 console I/O 243–246
 creating general-purpose
 250
 effects vs. side effects
 250–251
 free monads 242–243
 handling input effects
 232–235
 overview 231–232,
 235–236
 pure interpreters 246–247
 streams and 251–253
 side effects and 229–231

F

failover for parser combinators
 168–169
 filter method 64
 flatMap function 190
 foldable data structures
 183–184
 folding lists 178–179
 forcing 66
 for-comprehension 59–60
 forking, explicit 102–104
 format method 16
 FP. *See* functional programming
 free monads 242–243
 free theorem 111
 function literal 24
 functional data structure
 algebraic data types (ADTs)
 44–47
 data sharing
 efficiency of 36–37
 overview 35–36
 type inference 37–38
 overview 29–32
 pattern matching 32–34
 recursion over lists
 efficiency of 44
