

**EXERCISE 3.29**

Generalize `size`, `maximum`, `depth`, and `map`, writing a new function `fold` that abstracts over their similarities. Reimplement them in terms of this more general function. Can you draw an analogy between this `fold` function and the left and right folds for `List`?

3.6 *Summary*

In this chapter, we covered a number of important concepts. We introduced algebraic data types and pattern matching, and showed how to implement purely functional data structures, including the singly linked list. We hope that, through the exercises in this chapter, you got more comfortable writing pure functions and generalizing them. We'll continue to develop these skills in the chapters ahead.
